

The Remote Tester Kit

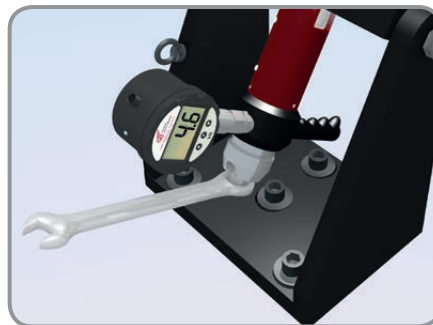

The Hydrajaws Remote Tester Kit is a purpose built system for testing anchor points, beams and eye bolts within lift shafts. It consists of a frame which is directly mounted at floor level, a series of extension rods and an adaptor - which is operated by the Model 2050 Hydraulic Tester (supplied separately).

The simple but effective design of the tester saves time and money by replacing the need for the standard expensive and complicated scissor lift/scaffolding equipment that is usually required for this test.

A comprehensive range of accessories is also available further increasing the scope of possible testing applications.

Kit Contents

- Unit sides
- Shoulder screws
- Unit base
- Unit bridge
- Collar inserts
- Socket cap screws
- 8mm Allen key
- Ratchet spanner
- Eyebolt hook
